

# PRODUCT PROFILE

## DYNASTRIP | TECHNICAL DATA

### PRIMARY APPLICATION

Dynastrap is a heavy-duty, highly alkaline, powder degreaser designed for the paper-, engineering- and mining industry. It strips off oil, grease, road grime and other deposits from concrete floors and metal surfaces.

The outstanding soil suspension properties of Dynastrap ensure effective cleaning and rinsing.

### APPLICATION PROCEDURE

#### Heavily Soiled Area:

Pre-wet surfaces with hot or cold water. Apply Dynastrap undiluted to the contaminated area. Agitate badly soiled areas with a hard bristle broom. Allow for 10 – 20 minutes of contact time. Rinse with a high-pressure spray.

#### Lightly Soiled Area:

Pre-wet surfaces with hot or cold water. Dilute Dynastrap one (1) part concentrate on ten (10) parts water. Agitate badly soiled areas with a hard bristle broom. Allow for 10 – 20 minutes of contact time. Rinse with a high-pressure spray.

Dynastrap is effective in cold solutions at room temperature. Efficiency increases with higher temperatures, however. To mix, simply add to water and stir.

Refer to the MSDS for the safety and handling precautions.

**KEEP OUT OF REACH OF CHILDREN.**
